

Pail, Milking

Date

c. 1960

Medium

metal (stainless steel alloy)

Description

Milking pail, appears to be 13-quart size. Body of pail formed from seamless stainless steel; tall, very smoothly-finished, narrow at base, with strap-style pouring handle spot-welded near bottom. Pail tapers outward toward the top to a wide mouth, with a flat (unrolled) upper rim, having two integral formed "ears" or lugs to mount a heavy bail-type carrying handle. The pour handle appears to have been repaired/reattached at one time, by welding a large bead from the inside.

Dimensions

13 x 14.5 in. (33 x 36.8 cm)
